LIVING

RELIEVE SEASONAL ALLERGY SYMPTOMS

by Kelly Thomson, MSHP

Spring brings warmer weather, more sunlight, and blooming trees; but for millions of people, it also brings seasonal allergies. Sneezing, a runny nose, and itchy eyes can make the end of winter bittersweet. Thankfully there are a few simple steps you can take to keep the pesky symptoms at bay:

Take your shoes off at the door. Wearing your shoes in the house can track pollen throughout your living space.

Shower before bed instead of in the morning. Switch to a nighttime shower routine so the pollen collected in your hair and on your body during the day doesn't get transferred to your bed and pillow to make your morning miserable.

IN THIS ISSUE

- 2 Drive Safe & Distraction-Free
- 3 Explanation of Benefits
- 4 Harvest of the Month: Rhubarb

Keep the windows closed. The sunshine and breeze during the first warm weather of the year makes it tempting to let the breeze in, but pay attention to pollen counts and keep the windows closed when the counts are high.

Wear a mask when doing yard work. If you are in charge of the outside maintenance work, a painter's mask works great as a filter

Rinse your sinuses. Using a saline solution, along with a neti pot, is an effective and affordable way to reduce your nasal congestion. $\mbox{\ensuremath{\Xi}}$

is when pollen counts are usually the highest.

DRIVE SAFE & DISTRACTION-FREE

by Rachel Savieo

We've all been on the road and noticed someone trying to use their cell phone while maneuvering through traffic. You know this person is putting themselves and the drivers around them at risk, so you roll your eyes, shake your head, and wish they would put it away. Then you hear the familiar ring, buzz, or ding from your phone. What do you do? Be honest!

Distracted driving is a serious and dangerous epidemic in the United States. According to the U.S. Department of Transportation, 3,154 people were killed in distracted driving accidents in 2013. Distractions include anything that takes your attention away from the road, including texting, using a cell phone, eating, adjusting the radio, etc. Since texting combines the three main causes of distraction (visual, manual, and cognitive), it is by far the most dangerous. The National Highway Traffic Safety Administration (NHTSA) estimates that at any given daylight moment in America, 660,000 people are using cell phones or manipulating electronic devices while driving.

It is easy to think that peeking at a text won't make much of a difference. After all, sending or reading a text only takes an average of five seconds. However, at 55mph you will have traveled the length of a football field in five seconds—plenty of time for an unexpected event to cause an accident.

Hands-free devices take a step in the right direction to prevent unnecessary accidents since they remove two types of distraction—visual and manual. However, the conversation itself involves cognitive distraction which can cause drivers to miss important visual and audio queues that could help avoid a crash.

ACCORDING TO THE U.S.
DEPT. OF TRANSPORTATION,
3,154 PEOPLE WERE KILLED
IN DISTRACTED DRIVING
ACCIDENTS IN 2013

The government is also taking strides to address distracted driving, but there is still a long way to go. Individual states are responsible for passing laws against texting, talking on a cell phone, and other distractions. In Indiana, there is a ban on all cell phone use (handheld and hands-free) for drivers under the age of 18, and texting while driving is illegal for all ages. Of course, enforcing these laws is tricky.

You can take steps right now to influence your family and friends by educating them on the risks involved with distracted driving. Set a good example for your children by putting your phone where you cannot reach or hear it while you are driving. Go to www.distraction.gov and print the pledge form to make the commitment to drive distraction-free. Be sure to have this important conversation with your family members too. Make sure they all know to speak out if the driver of the car they are riding in is distracted. These small steps can make a world of difference. μ

A SIMPLE EXPLANATION

by John Thomas

You know the drill: Shortly after receiving healthcare services, you get mail from your insurance provider. The good news? As it says in big letters, "This is not a bill." Unfortunately, that makes it tempting to ignore. But don't—this Explanation of Benefits (or "EOB") is important.

As you look at your EOB, keep a few things in mind:

- **Different EOBs for different things:** You might get multiple EOBs for a single visit to a healthcare provider. That's OK. They cover different aspects of your visit.
- Names: The "insured" has the insurance coverage; the "claimant" is the person who received medical services.
- **Charges:** Different insurers use different words to describe charges, but one way or another, the EOB tells you:
 - » The original charge
 - » A reduced amount your insurer has negotiated
 - » The amount your insurance covers
 - » The amount you pay
- Codes: These footnotes explain factors that went into charges.
- **Deductible/Out-of-Pocket to Date:** This lets you know how much more you have to spend before you meet your deductible or out-of-pocket limits.

FINANCIAL CORNER WITH PETE THE PLANNER

I've found most people are on one of two financial tracks.

The first is the track where everything is going wrong, you are constantly panicking, and you're unlikely to take action because you feel stuck.

The second track is when everything is just good enough that you can ignore the future and hope for the best. As you can imagine, neither track is ideal.

I'm proposing a third track. This track is full of the normal ups and downs. Those are unavoidable. What's special about this track is your attitude. Your attitude is everything. I'm asking you to care about your financial life.

Sound overly simplistic? Sadly, it's not. I meet people daily who don't care enough. Care more. Do more. Take action. Everyone has the chance at being financially healthy if they try. Start by picturing the financial life you want and work toward it every single day. ¤

An EOB can look intimidating, but it's pretty clear once you get used to looking at it. It's important that you do look at it to confirm you're being charged correctly. If you have questions about information on your EOB, contact your insurer immediately. There's usually a limit to how long you can wait before questioning a cost. $\mbox{\ensuremath{\square}}$

NATIONAL HEALTHCARE DECISIONS DAY APRIL

April 16 is National Healthcare Decisions Day. It is meant to inspire, educate, and empower the public and providers about the importance of advance care planning. The initiative encourages patients to express their wishes regarding health care and asks providers to respect those wishes. The theme for 2016 is "It Always Seems Too Early, Until It's Too Late." HARVEST OF THE MONTH: RHUBARB

by Jenna Mears

Commonly referred to as the "pie plant," rhubarb is a member of the buckwheat family and is actually a vegetable, not a fruit. Though often used for baked goods, rhubarb has astounding nutritional value! It has protein, three different vitamins, calcium, and potassium to name a few. Rhubarb is one of the lowest caloric vegetables and it is recommended for those individuals struggling to lose weight. It is also recommended for cardiovascular health, digestion, and Alzheimer's disease.

How to Select

When buying fresh rhubarb, look for moderately thin, crisp, dark pink to red stalks. Greener, thicker stocks are more stringy and sour. Leaves should be crisp and free of blemishes. Rhubarb's peak season is April-June but it is normally available year-round.

How to Store

Fresh rhubarb is perishable and should be kept in a plastic bag in the crisper drawer. It is best when stored only 3-5 days before use. If you need to freeze rhubarb, cut it into one-inch chunks and store in an airtight bag. Rhubarb is also easily canned.

How to Prepare

Rhubarb is best served when stewed or braised. To do this, first wash the rhubarb and slice each stalk into one-inch chunks, discarding the leaves as they should not be eaten. Mix equal parts water and sweetener of your choice in a sauce pan. Boil the mixture, stirring until the sweetener is dissolved. Next, stir in the chopped rhubarb and bring to a boil then lower heat to a simmer and cook uncovered for 10-15 minutes. $\mbox{\sc m}$

RECIPE OF THE MONTH:

Oatmeal Rhubarb Porridge

Ingredients:

1 ½ cups nonfat milk or nondairy milk

½ cup orange juice

1 cup old-fashioned rolled oats

1 cup ½ inch pieces rhubarb, fresh or frozen

½ tsp ground cinammon

Pinch of salt

2-3 Tbsp brown sugar, pure maple syrup, or agave syrup

2 Tbsp chopped pecans or other nuts, toasted

Directions

- 1. Combine milk, juice, oats, rhubarb, cinnamon, and salt in a medium saucepan and bring to a boil over medium-high heat.
- 2. Reduce heat, cover, and cook at a very gentle bubble, stirring frequently until the oats and rhubarb are tender (about 5 minutes).
- 3. Remove from the heat and let stand covered for 5 minutes.
- 4. Stir in sweetener to taste and top with toasted nuts.

Tip: To toast chopped nuts, place in a small dry skillet and cook over medium-low heat, stirring constantly until fragrant and lightly browned (about 2-4 minutes).
